PROFESSIONAL SUMMARY

Software Engineer with experience building backend systems, data pipelines, real-time streaming applications, and database-driven solutions using Python, SQL, Django, PostgreSQL, and Apache Kafka. Experienced in designing ETL workflows, data models, REST APIs, and analytics solutions. Strong foundation in data engineering, backend development, cloud technologies, and modern data platforms.

TECHNICAL SKILLS

Programming Languages: Python, SQL, JavaScript

Data Engineering: ETL Pipeline, Apache Kafka, Data Modeling, Data Warehousing, Batch Processing, dbt, Streaming Pipelines,

Backend: Django, Django REST Framework, REST APIs

Databases: PostgreSQL, MySQL, Schema Design, Query Optimization

Analytics: Pandas, NumPy, Matplotlib, Plotly, Streamlit, Power BI

Cloud & Tools: AWS, Docker, Git, GitHub

Core Strengths: Teamwork, Communication, Problem-Solving, Time Management, Adaptability

PROFESSIONAL EXPERIENCE

CodeQuant Tech. Pvt. Ltd.

Sanepa, Lalitpur, Nepal

Backend Developer

Aug 2024 – Nov 2025

- Architected and delivered scalable RESTful APIs with Django REST Framework, powering core web and client-facing applications.
- Engineered optimized PostgreSQL schemas and complex queries that preserved data integrity across business-critical modules.
- Built robust Python data-processing and reporting pipelines (Pandas, NumPy, Matplotlib), transforming raw data into actionable insights for stakeholders.
- Strengthened application security via authentication systems and third-party integrations, and owned Git/GitHub workflows, resolving production issues.
- Drove Agile/Scrum collaboration, sprint planning, code reviews, deployments, and mentored incoming backend interns with hands-on guidance.

CodeQuant Tech. Pvt. Ltd.

Sanepa, Lalitpur, Nepal

Django Developer Intern

Jun 2024 – Jul 2024

- Built RESTful API endpoints and implemented efficient CRUD operations with Django REST Framework and PostgreSQL under developer mentorship.

IMS Software Pvt. Ltd.

Tripureshwor, Kathmandu, Nepal

Angular Developer

Sep 2023 – Dec 2023

- Engineered responsive, high-performance web applications using Angular, TypeScript, HTML, CSS, and Bootstrap.
- Crafted reusable, interactive UI components that elevated consistency and maintainability across the application.
- Integrated frontend features with backend APIs to boost performance, partnering closely with designers and stakeholders.
- Drove the full Agile lifecycle sprint planning, stand-ups, testing, and code reviews using Git/GitHub for version control.

PROJECTS

Real-Time Fraud Detection System | Python, Apache Kafka, PostgreSQL, Streamlit, Docker

- Designed an event-driven streaming pipeline using Apache Kafka to detect suspicious financial transactions in real time.
- Developed rule-based fraud detection logic and stored alerts in PostgreSQL for historical analysis.
- Built an interactive Streamlit dashboard to monitor fraud trends and high-risk transactions; containerized the application with Docker.

Job Market Intelligence Platform | Python, PostgreSQL, Streamlit, Plotly, Docker, Pandas

- Built a job analytics platform that collects and processes job postings into a normalized PostgreSQL database.
- Implemented automated skill extraction from job descriptions to identify in-demand technologies and hiring trends.
- Designed interactive dashboards with Streamlit and Plotly to visualize job market insights and technology demand.

Automated Weather ETL Pipeline | Python, PostgreSQL, Requests, psycpg2

- Developed an automated ETL pipeline that retrieves weather data from a public REST API and loads it into PostgreSQL.
- Designed a relational schema and implemented reliable, repeatable data loading with validation and error handling.
- Optimized the pipeline for scheduled execution by separating extraction, transformation, and loading stages.

Real-Time Event Streaming Pipeline | Python, Apache Kafka, PostgreSQL, dbt, Docker, SQL

- Developed a real-time event streaming pipeline using Apache Kafka producers and consumers to process simulated user activity.
- Persisted raw event data into PostgreSQL and built dbt transformation models to create clean, analytics-ready datasets.
- Containerized Kafka, PostgreSQL, and supporting services using Docker Compose for a reproducible development environment.
- Designed a modular data pipeline with structured logging, SQL transformations, and data validation to improve reliability.

EDUCATION

Trine University — M.S. in Information Science

2026 – 2027

London Metropolitan University — B.Sc. (Hons) in Computing

2021 – 2024

CERTIFICATIONS

AWS Academy Training: Cloud Foundations (2026), Cloud Developing (2026), Data Analytics (2022)

Great Learning Academy: Data Science with Python (2023)

LinkedIn Learning: SQL for Data Analysis (2023), Data Analytics Foundations (2023)
