

MAHIMA CHAUDHARY

+1 (469) 435-6709 • chaudharymahima983@gmail.com • www.linkedin.com/in/mahima-chaudhary-143826246

Summary

Detail-oriented software developer with experience in frontend development (Angular, Bootstrap) and backend development using Python and Django. Strong foundation in SQL, PostgreSQL, and data manipulation using Pandas and NumPy. Experienced in designing RESTful APIs, managing relational databases, and working with version control systems like Git. Skilled in writing efficient queries, data transformation, and backend logic, with a growing focus on data engineering principles including ETL processes, data modeling, and scalable data solutions. Passionate about building reliable data systems that support analytics and business intelligence.

SKILLS

Technical Skills:

Python, SQL, Django, HTML, CSS, JavaScript, Angular, Bootstrap, MySQL, PostgreSQL, ETL Pipelines, Apache Kafka, Data Warehousing, Data Modeling, Docker, Git, NumPy, Pandas, Streamlit, Matplotlib, Visual Studio Code

Soft Skills: Teamwork, Time management, Adaptability, Communication, Problem solving, Decision making

Education

Trine University

2026 - Present

Master of Science in Information Science

Islington College

2021 - 2024

B.Sc. (Hons) in Computing

CERTIFICATIONS

AWS Academy Cloud Foundations (July 26, 2022)

Online course - AWS Academy

AWS Academy Machine Learning Foundations
(August 14, 2022)

Online course - AWS Academy

AWS Academy Data Analytics (November 3, 2022)

Online course - AWS Academy

Data Science with Python (June 9, 2023)

Online course - Great Learning Academy

Learning Data Analytics: 1 Foundations (July 18,
2023)

Online course - LinkedIn Learning

SQL for Data Analysis (July 25, 2023)

Online course - LinkedIn Learning

Experience

CodeQuant Tech. Pvt. Ltd.

Sanepa, Lalitpur, Nepal

Django Developer

08/2024 - 11/2025

- Developed and maintained scalable RESTful APIs using Django and Django REST Framework.
- Designed database schemas and handled complex data operations with PostgreSQL.
- Processed and analyzed data using Python libraries such as Pandas, NumPy, and Matplotlib for internal reporting and feature logic.
- Collaborated in an agile development team using Git for version control.
- Supervised and mentored new backend interns, reviewing their code and guiding them through tasks.

CodeQuant Tech. Pvt. Ltd.

Sanepa, Lalitpur, Nepal

Django Developer Intern

06/2024 - 07/2024

- Built REST APIs for web and mobile platforms using Django and PostgreSQL.
- Participated in designing data models and performing CRUD operations efficiently.
- Worked with the backend team in agile sprints, using Git for version control and collaborating on GitHub.
- Gained hands-on experience in real-world project development, API integration, and client-driven requirements.

IMS Software Pvt. Ltd.

Tripureshwor, Kathmandu, Nepal

Angular Developer

09/2023 - 12/2023

- Collaborated with a development team to build and maintain Angular-based web applications.
- Worked on client-specific UI designs, and responsive components.
- Utilized Git for version control and contributed to code reviews and agile sprints.

Projects

Real-Time Fraud Detection System

- Used Kafka, Python, PostgreSQL, Streamlit, Faker.
- Designed and implemented a scalable event-driven architecture with Kafka-based producers and consumers for real-time data ingestion and processing.
- Developed a stateful fraud detection engine identifying anomalies.
- Integrated PostgreSQL for persistent storage of fraud alerts, enabling structured querying and historical fraud analysis.
- Built an interactive Streamlit dashboard with real-time visualizations including fraud trends, user risk analysis, and alert monitoring.
- Performed real-time analytics on streaming data to identify fraud patterns and user behavior anomalies.
- Containerized and orchestrated components using Docker for a consistent development and deployment environment.

Projects

Job Market Intelligence Platform

- Used Python, PostgreSQL, Streamlit, Plotly, Docker, Pandas, Requests.
- Designed and implemented a relational data warehouse in PostgreSQL, modeling jobs, skills, and job-skill relationships using normalized schema design.
- Built an end-to-end data engineering pipeline that ingests real-time job postings from a public API and processes them through a modular ETL system using Python.
- Developed a skill extraction engine using text processing techniques to identify in-demand technologies (Python, SQL, Kafka, AWS, Airflow, etc.) from unstructured job descriptions.
- Created a data analytics dashboard using Streamlit and Plotly to visualize job market trends and implemented interactive filtering and search functionality for dynamic exploration of job data.

Automated Weather ETL Pipeline

- Used Python, PostgreSQL, requests, and psycpg2.
- Built an end-to-end ETL pipeline using Python, Requests, Psycpg2, and PostgreSQL, extracting weather data from OpenWeatherMap API, transforming it, and loading it into a dimensional data warehouse.
- Implemented idempotent loads, schema constraints, and data integrity checks to ensure production-ready, reusable workflows.

Real-Time User Event Streaming Pipeline

- Used Python, Apache Kafka, PostgreSQL, Docker, and Faker.
- Used Visual Studio Code and Docker Compose
- Built a real-time data streaming pipeline to ingest, process, and store user interaction events into PostgreSQL, enabling near-real-time analytics on user behavior and activity patterns.
- Implemented containerized infrastructure to ensure reliable message consumption, structured data storage, and analytical SQL queries for event trends, user engagement, and pipeline health monitoring.

Sentiment Analysis

- Used Python and Django.
- Built a Django-based Sentiment Analysis application that analyzes user-inputted text using NLP models. It not only classifies text as Positive, Negative, or Neutral but also extracts keywords, named entities, and predicts emotions. Additionally, it visualizes sentiment trends using pie charts.
